SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	**2014_AJEA_14281**
Title of the Manuscript:	**Effects of Lactic Bacteria over the Microbiological Quality of Silage**

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	**Authors' response to final evaluator's comments**
1. The itemised responses from the authors to the list of points previously raised by the reviewer were very scant. There needed to be a clear response to each individual item. **2. The general standard of English throughout the manuscript is still considerably below what is required for an international peer-review journal. Therefore, very considerable and fundamental revision of the English is still required.** **3. Too much of the review is still composed of a series of short summaries of relevant published papers rather than an interpretation based on a deep synthesis of all the available information and a critical interpretation of same.** **4. Much of the literature reviewed relates to warmer-season grasses, etc. There is nothing wrong with this but, in order to justify the omission of the many relevant published papers dealing with cool-season grasses, etc., it will be important to modify both the title and stated objectives (and conclusions) so that they indicate the focus on on warmer-season grasses, etc.**
