SDI Review Form 1.6

Journal Name:	**British Journal of Mathematics & Computer Science**
Manuscript Number:	**2013_BJMCS_6354**
Title of the Manuscript:	**Existence and Structure of Entire Large Positive Radial Solutions for A Class of Quasilinear Elliptic system1**
Type of the Article	**Research Paper**

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.
To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	It's unusual to see how the system has been badly introduced at the beginning of the text. In abstract, Line 4, to replace *u* by *v* in the left hand side of the equation. The same remark in L^{+8}; Page 1, L^{-2}; Page 2, L^{+4}. Page 2, L^{+8} To write correctly A_2 … Page 2, $L^{+8,+9}$ The functions *m* and *n* are not defined. Page 3, L^{+5} To write correctly A_2 … Page 6 To reconsider Lemme 2.2. The function $\theta(t)$ always exists. For exemple: to get $\theta(t)=\sup_i h_i(t)$. Page 8 To rewrite equation (22). The term *(u,v)* in L^{-7} does not make any sens. There is also a faulty shunting. Page 9 To delete the term ''lim'' in L-4; and *p* by *j* in L^{-3}. Page 10 To reconsider the equations in $L^{+5,+10}$. There is a fautly shunting in L^{+13}. To replace *p* by *q* in L^{+17}. To write v_{k-1} in L^{-13}. In L^{-12}, the same remark as in L^{+17}. To write u_{k-1} in L^{-11}.	**My paper have been modified arccording to Review. Please see the correct the manuscript.**

SDI Review Form 1.6

	Page 11 In L^{-7}, the pair *(u,v)* is a solution of (1) if *F=f* and *G=g.* Page 12 Both the inequalities are incorrect in $L^{-11,-9}$. Page 13 To delete the term ''*lim*'' in L^{+7}. Page 14 All along the page, to replace Lemma 7 by Lemma 2.7 Why to introduce the term "σ" in L^{-2}? Page 15 In L^{+1}, this is the Corollary 2.6 To write Lemma 2.3 in L^{-6}.	
Minor REVISION comments	To read through again: Page 4, $L^{+8,-10}$; Page 6, L^{+2}; Page 8, L^{-5}; Page 9, $L^{+9,-13}$; Page 10, $L^{+1,+7}$; Page 11, $L^{-13,-5,-3}$; Page 12, L^{-13}; Page 13, L^{-7}; Page 15, $L^{-10,-9,-7}$; Page 16, to see [13].	
Optional/General comments	The author use the monotone iteration method skilfully. The paper is well structured. Nevertheless, the part from L^{-3} to L^{-1} lacks clarity.
