SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	This is a well written and illuminating paper on TB ,HIV coinfected patients.Personally I hardly understand acceptance or denial of HIV testing since these choice directs and affects the clinical outcome of these patients.In public health matters benefits of community must outweigh so called personal choice which can be detrimental for the person .The relationship between TB and HIV infection shown in percentages reflects the situation in Lagos.But this strong relation can be extrapolated at least in minds in the management of these patients.I found this text very useful as a clinical research.	
Minor REVISION comments		
Optional/General comments
