

SDI Review Form 1.6

Journal Name:	American Chemical Science Journal
Manuscript Number:	2015_ACSj_18107
Title of the Manuscript:	Synthesis and Characterization of Some Coordination Polymalimides
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	Authors presented valuable data on the synthesis of new polymeric aza-compounds, their metal chelates. Infrared spectra, electronic spectra are described well enough. As for biological activity study, a vast majority of readers are aware of such parameter as MIC (minimal inhibitory concentration, mg/mL) and not so good at using the disk diffusion method. So, data of Table 3 are not so clear, and authors should specify what number of mm corresponds to high or moderate activity. Some inaccuracies are present in work Line 81 – solution of salts (not of metals) were used Line 51 – p-Aminophenol (11.93 g, 0.11 mol) and maleic anhydride (10.78 g, 0.11 mol) were dissolved ... Line 27 – past action (we have synthesized, polymerized and prepared complexes)? and some more mistakes in English	
<u>Optional/General</u> comments
