

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Chemical Science Journal
Manuscript Number:	2015_ACSj_18204
Title of the Manuscript:	Electronic effect of substituents present on carbonyl compounds: Analysis of product formation in one-pot synthesis of 1, 3, 4-thiadiazole ring
Type of the Article	Short Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have implemented some of suggested reviewer's comments. On the other hand, in Experimental section, I very strongly recommend to complete companies and countries in which all the equipment used was manufactured. This comment has been also included in first compulsory revision comments. Furthermore, the References section should be very strictly modified. For example, compare, please, the indication (formal aspect of indication) of the pages range for the references 2-7 vs. 8-12 (or 13). In addition, the journal title abbreviations cited should be strictly used in all cases. Furthermore, <u>in references 6, 7, 9 and 13, first names (given names) of all authors were listed instead of referencing their surnames(!)</u>. Formal aspect of all references must be consistent. All given comments should be strictly taken into account in the final version of reviewed manuscript. I would like to very kindly ask the Editorial Office Member(s) to control the implementation of all essential comments given above. After such essential revision only, I recommend the article to publish in the American Chemical Science Journal.
