

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Advances in Research
Manuscript Number:	2014_AIR_14362
Title of the Manuscript:	Relationships between mild/severe knee joint pain and fall risk assessment items in elderly females

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
If you are so adamant that u can't change discussion I can't help you	I cannot change discussion, because it is important that the corresponding rates of fall risk survey items among 3 groups of elderly females categorized on the basis of knee pain (no knee pain, mild knee pain, and severe knee pain). Assessments of items selected by elderly individuals with knee pain may be important to decrease the fall risk. Therefore, rewrite of the discussion is impossible.
