SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Although a great many statements are made and statistics quoted without any reference to those sources (eg section 2 lines 59-63, 139-153)	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	An interesting article that focuses purely on the contribution of transportation (predominantly in the USA) to climate change. There is a recognition that transportation is a significant contributor to climate change, but the percentage contribution does differ from country to country and developing countries may have a much lower transportation contribution. However, the arguments for more efficient public transport and non-motorised transport options are accepted, along with the need for more compact and energy efficient cities.
