

SDI Review Form 1.6

Journal Name:	Advances in Research
Manuscript Number:	2014_AIR_10443
Title of the Manuscript:	Validation of decision cut off values of serum albumin and prothrombin time for differentiating between compensated and decompensated liver cirrhosis.
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment:	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>I read with interest the manuscript: (Validation of decision cut off values of serum albumin and prothrombin time for differentiating between compensated and decompensated liver cirrhosis). Authors used a cross sectional study design in patients with cirrhosis either with compensated or decompensated and compare the studied parameters including serum albumin and bilirubin and prothrombin time in both groups. Actually the aim of the study was <u>deadly evaluated</u> and we got the Child-Pugh score and its modification many years ago, its parameters including: serum albumin and bilirubin and prothrombin time,..... and other parameters including encephalopathy, Ascites and nutritional state. And their parameters were established with their values into those with child class A, B and C. Then other adding parameters; like Na serum level, was added to improve the quality of the score. Other scores also are available for prognosis.</p> <p style="padding-left: 40px;">So what is the new in this study nothing can be added to the science?</p>	
Minor REVISION comments
