

Editorial Comments:

Many thanks for your submission to AIR and all the efforts to reply to the comments. However, revisions are still needed. Please follow the suggestions presented below:

- Line 119. The authors should identify the references of each AOAC method used during the M&M;
- Results and discussion section should present text information regarding the data presented in the tables. One alternative is to merge these two sections.

Author's Feedback:

The reference AOAC method used has been given and the results presented as suggested although it was not clear to the authors, the suggestion made by the reviewer regarding the presentation. We will, therefore, be more grateful if the reviewer will be obliged to effect the arrangement if what he meant is not what we effected. We have been much indebted to the useful suggestions made by the reviewer as these have added more value to our write up. Thank you very much.
