SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	**Advances in Research**
Manuscript Number:	**Ms_AIR_19816**
Title of the Manuscript:	**Advances in Modern Physics: Transition from Positivism to Post-positivism in Education and Research**
Type of Article:	**Opinion Article**

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The article presents interesting (even important) philosophical ideas based on a post-positivistic worldview, justified by the realities of quantum physics, with implications for research and education. The document now expresses the views of the author sufficiently well for the interested reader. The abstract is now clear enough to accommodate the author's preferred title. Whilst a simpler title would have been my preference on the grounds of clarity, the author's choice in not oversimplifying is respected and the reason for that understood and accepted, as are some remaining minor difficulties in language, so-called L1 interference. I would personally have preferred more emphasis on expanding the didactic and methodological implications rather than on the historical and descriptive account of quantum mechanics. But that is subjective: it is after all the author's opinions being expressed here. For future works I can not over-emphasize the difficulties of writing works requiring philosophical subtlety in a second language and the importance of getting it right at the earliest possible stage. I salute the author in their efforts and know from personal experience just how difficult this can be. I recommend the article (barring any type-setting issues) for publication in its present form. In my opinion it now satisfies the requirements of an opinion article for Advances In Research without need of revision.
