subject: Re: Request for final decision for manuscript number 2012 AJAEES 1856

mY COOMMENTS-

The manuscript concept to include indigenous knowledge for overcoming difficulties facing farmers in food production under the climate change. The manuscript does not clearly mention the examples of indigenous knowledge used in agriculture at the local level, especially facing drought or flooding or biotic stresses or high temperature. How farmers conserve water under different conditions or perform conservation agriculture; and give linkage of indigenous knowledge with modern scientific knowledge. Even though the manuscript is an opinion paper, authors should highlight successful examples of using indigenous knowledge for growing crops facing climate change, water conservation, proper land use, and type of crops grown, and also germplasm conservation aspect. Participatory agriculture certainly would benefit farmers in introducing new tools together with indigenous knowledge, and also get information to get right kind of package for agriculture. There may be a need of developing a package program depending on the land usage under the climate change, e.g. produce feed for livestock production.

AUTHORS HAVE REVIUSED MANUSCRIPT ACCORDINGLY, HOWEVER STILL REQUIRES FURTHER CHANGES. CERTAINLY THIS MANUSCRIPT IS WORTH PUBLICATION, NOT BEFORE MAKING THE SUGGESTED CHANGES.

Thank you
