

The paper examines the indigenous knowledge as a strategy for climate change adaptation among farmers in sub-Saharan Africa. It is an important issue for strengthening the climate change adaptation policies in the developing countries. Authors have made a big effort to make a nice paper but it still lacks some clarity. The content abruptly jumps from one issue to other and doesn't discuss much in the context of Sub-Saharan Africa. I have used local examples obtainable in countries like Nigeria. Some of my comments are as below.

1. In the introductory part, the sentence in line 36, "Indigenous knowledge is not transferable" appears contradictory to the sentence in line 29, "passed on from one generation to the other by word of mouth". I have done the corrections to tally with what I have in line 29
2. The scientific name of plants in Line 71 should be italicized. I have italicized it.
3. In Line 80, do the authors mean to say cultivars or cultivators? I mean cultivars. I have corrected it.
4. I believe that authors invested lots of effort in setting the introduction of the study, they included many examples of Indigenous Knowledge (IK) which is very supportive but the writing is more in the way of discussion than introduction. It should be précised how IK is helping in adaptation and how useful it will be in policy formulation. I have done that.
5. Methodology needs some elaboration and clarity. The paper is a review. It was based on literature and observations.
6. Authors directly jump from methodology to major discussions, it will be better to give the section heading and write few lines before starting the discussion. It is a review paper.
7. In Line 133-136, some references should be added as possible. I have added more references
8. Research title is using indigenous knowledge but the discussion on Water and land resources usage as indigenous adaptation measures does not talk about indigenous knowledge on adapting to water and land resources. I have looked at it again.
9. Line 203 needs correction, seems some wording is missing or repeated. I have checked and corrected it.
10. Line 203 needs correction, seems some wording is missing or repeated. I rephrased the sentence
11. Line 253, the word is changes right? Not hanges. It is an omission. I have corrected it.
12. Climate change, land and indigenous people, this heading doesn't include anything related to indigenous people in Sub-Saharan Africa. I have corrected it.
13. The discussions jump from one heading to other without much clarity. No comments.
14. The conclusion appears more general than from the finding of the research. I have done that.
15. Paper needs proper editing. I have done the editorial work.
