PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. Proceed to harmonize the corrections in the main body of the paper with the Abstract. For instance line 76-77 referred to the use of multistage sampling technique while the abstract indicated simple random sampling procedure. 2. Clear process of random selection still need to be addressed. The issue of urban vs rural communities need to be stated categorically considering their importance to the object of the study.	The correction has been made. The study was conducted in selected villages in the rural areas NOT in the urban area This has been stated in the abstract and methodology. Then the women were purposively selected based on their involvement in livestock production. This has been corrected in the body of the text. T
