SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	• Methodology section of abstract where the word 'principle' should be changed • In line 91 'Livelihood improvement status: Livelihood improvement score of the tea garden workers ranged from 5 to 44' is not clear. • Before using homogeneous subset set i think it would be better to do statistical test i.e. ANOVA etc	• 'Principle' word was removed • Regarding line 91, in methodology section it was mentioned that total livelihood improvement score may vary from 0-57 (mentioned in line no 67) and in result section it was written that observed score varied from 5-44. However, possible range 0- 57 was added in line no 91 for clear understanding.
<u>Optional/General</u> comments	I think the methodology that are adopted in the paper is based on the work of Haque. My question is whether the 19 indicators and also the four point rating scale that are used in the study also adapted from Haque, otherwise needs reliability and validity of the instrument. Even then in this paper you may go for these test viz. Reliability, validity and normality test for further improvement of paper.	• Yes, the four point rating scale and other related contents of interview schedule were adopted from Haque.
