SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	The article is well written, the current version need to be revised: Table 2, Table 3 and Figure 2 shows the same information. The author should combined these into one table and describe it clearly. Table 4 describe the information for only one year, the author should include few years data and describe the trend. In the results and discussions section Line # 84-90, there is no need to describe the Lychee production in other countries, this section can be moved to the Introduction and background section. The Regression results should be discussed clearly, and also the conclusions which need to revise based on the adequate discussions of regression results. There are too many recommendations, which are not all from the results. There are typos throughout the article, such as Line # 52-53.	- The authors would like to thank the unknown reviewer for his/her valuable comments. - We have deleted figure 2 and 3 as the suggestion and improved explanation clearly (Line 122) - The price of lychee by variety and season is available for one year, 2011. Lack of few year data is considered as a limitation for this manuscript. - Since there are several countries can produce lychee. So, the authors tried to show much clear information about the overview of lychee industry in the world. - The method has been improved to show the logit regression analysis clearly. - The spelling mistakes such as line 52-53 and so on have been improved.
<u>Optional/General</u> comments	The paper contributes very useful information through the findings of primary data. However this paper can be improved substantially through incorporating the information about the challenges of the GAP farmers to increase production and what is the cost effective strategies that government can undertake to improve the management.	Thank you so much the reviewer for these general comments. These points can apply to my futher studies in near future.
