SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Literature Review 2.3 Determinants of non-farm participation The author just review only one article that is related to this research. This is unbelievable! The author should review more empirical research and add to this sections. 4.1 Demographic characteristics of Households Line 178-179, "This means that the males who are more involved in farming activities are now engaging in non-farm activities". This statement is false. Because 78.7% of the households are headed by males does not mean that this is what is making the male headed household to leave farming. There is no fact to support this sentence. The author should completely remove this or give it a different interpretation based on table 2 results. Line 182-183, "From the table, 75% of the household heads which represent the majority of the working force are now engaging in non-farm activities". This is another wrong statement. Section 4.1, should be rewritten and discussion should be based on the result presented in table 2. Line 201: "Households headed by the young (the youth) ..." This variable was not included in the model. How come it is being discussed? The discussion of the logit result especially, the dummy

	variables are appropriate. Example, in Line 211, “<i>This indicates that female headed households had the greater....</i>” According to how the author captures this dummy variable in table 1, the interpretation should be written in favour of the male headed households not female. The author should correct this statement for all dummy variables discussed in the paper. Line 228: Of them simply ~~shine~~ (shy) away from farming activities ~~but rather~~. The author should effect this correction in the paper. Line 229: Marital (status) of household. Insert the word “status” in this line. Conclusion Line 247: ... households whose heads had (more years of) formal education. Line 251-257: the recommendations are not based on the findings of this research. The author should write or give recommendation based on the findings of this research.	
<u>Minor</u> REVISION comments	Abstract The line which says... ‘live in rural areas and live in savannah areas should’ should be written as ‘lived in rural and savannah areas....’	
<u>Optional/General</u> comments
