

I have reviewed the manuscript 2013_AJEA_3446, INFLUENCE OF AGRICULTURAL LIME ON SOIL PROPERTIES AND WHEAT (*Triticum aestivum* L.) YIELD ON ACIDIC SOILS OF UASIN GISHU COUNTY, KENYA, at detail. Since the first review comments, the manuscript had many comments about its quality, clarity and grammar. During the second reviewing, the manuscript improved substantially but however the manuscript is not clear and have some serious mistakes which were indicated by the reviewers during the peer review process i.e. the authors did not attended these comments and recommendations. Some examples of the serious mistakes are the unclear and mistyped typical methodologies and the unclear Figures, while some of these have not axes.

Kindly note the corrections as indicated below

Page 8 line 243 and 249-figure 1 and 2 different graph has been draw which as fairly visible and hopefully is showing the effect of lime on soil pH better than the initial figures. Page 8 line 279 figure 3 the axis has been corrected.

Page 9 lines 285 and 286 N and P as the two were not treatments has been deleted

Page 10 line 317 and 320 figure 4 the axis has been corrected

Page 11 line 330 and 334 axes have been corrected

Page 12 line 357 the axis corrected

Page 13 line 364 the axis corrected

The conclusion which previously included N and P as soil amendments as been corrected.

Reactions

There was no figure without the axis.

After redrawing figure 1 and 2, it is clear that the pH increased due to lime additions.

N and P were not soil amendment material, and correction has been done according,

Spelling mistakes have been corrected e.g line 159 1nd 161.
