

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	2013_AJEA_6372
Title of the Manuscript:	Preparation and Characterization of O/W Emulsion Formulation of Deltamethrin

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The article seems very interesting in presenting alternatives for the traditional environmentally-damaging method of pesticide formulations. The authors characterize the new formulation by means of several assays. The only main flaw, in my opinion, is the lack of comparison of this new formulation against some traditional one. However, the manuscript is now accepted for publication.	

PART 3: Objective Evaluation:

Guideline	MARKS for this REVISED manuscript
Some minor corrections to do: • The references cited in the text are often confusing, like "MT12", etc. Cite them properly. • The centrifugation assay is not well described. It is not clear what are they measuring. • In the section "Active ingredient content" (Results and Discussion), the first phrase is grammatically wrong.
