Subject: Re: Request for final decision for manuscript number 2013/AJEA/3649

I am sending you my remarks on the last revised version of the manuscript. All my remarks and changes have been made on the manuscript.

I would like to point out that the authors made part of the changes I had suggested in my previous revision while in the Abstract they insist on making conclusions on the content of Mn, despite the fact that the main aim was the effect on yield and fruit quality (as stated in the first sentence of the Abstract).

I urge the authors to delete the double presented data and proceed to the changes suggested. Perhaps the statistical analysis between treatments on the total content of Mn (as mg per mass fruits produced - yield) would offer new interesting data. I would also like to suggest publishing the manuscript (after being properly revised based on the suggestions made on the ms) as short communication, since after deleting the double presented data the length of it could permit publishing it so.

Editor's Details:

Peter A. Roussos

Lab. Pomology, Agricultural University of Athens, Greece
