SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Understanding about the role of amino acids in fish physiology is an important subject, and assists the determination of quantities to be used in formulating rations. The stress on intensive farming is one of the factors that affect the health of animals in farming; I believe that the study could provide more results if it were held in conditions closer to those found in fish farm. Despite the information contained in this work are important, not identified situations that could mimic the stress in fish farming	This study was conducted under laboratory (intensive) condition, which is definitely different from the field conditions. Results could therefore be different if conducted under natural farm conditions. I will state this as my recommendation.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
