

SDI Review Form 1.6

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	2013_AJEA_6265
Title of the Manuscript:	EFFECTS OF LOW PROTEIN DIETS SUPPLEMENTED WITH HIGH AMINO ACIDS (METHIONINE AND LYSINE) ON PERFORMANCE OF BROILERS.
Type of the Article	Research Paper

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The research motive was well conceived but the methodology was faulty and could have been responsible for the poor result obtained here. The variation in inclusion levels of methionine and lysine could not have been solely responsible for experimental inference since these 2 amino acids are not the only limiting amino acids in poultry feeds. Other essential amino acids (tryptophan, threonine etc) are all important. Even if these lysine and methionine were to be considered, the varied maximum inclusion levels of 0.5% and 0.8% for methionine and lysine respectively were still within the recommended requirements for broiler. The conclusion that supplementation increased monetary losses is not understood as this conclusion negates the whole essence of your study. Besides, you did not carry out any cost analyses in your study so how did you arrive at your cost benefit conclusion? There are lots of typographical errors that I tried to point out. Kindly proof read your work very well.	It is true these two are not the only limiting amino acids but These two were used for this study.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
