

Reviewer Comment:

I am unable to review the revised manuscript for the following reasons:

1. The authors did rework the results and discussion to bring out clearly what is new about the study.
2. The authors have not provided the name of the committee that approved the protocol.

Overall, the authors have not revised the paper as requested by the reviewer. I will be glad to do the final review when the suggested revisions have been made by the authors.

Author's Feedback:

The corrections pointed out were effected to the best of our ability. Typographical mistakes were carefully taken care. Sections 2.2 and 2.3 were re-written

Where enzymes were used instead of enzyme were corrected

The word **positive influence** as used meant **increase in value** but the phrase was replaced by more appropriate phrase

Result and discussion were reworked to the best of our ability.

The work is an original work by a team of scientist.

The committee that approved the protocol was a local scientific committee of my Department. We decided to edit the aspect of the approval since we did not use human subject or carried out any work that needed special approval.

We have revised the paper as could be seen in areas marked with yellow.
