

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	2014_AJEA_11412
Title of the Manuscript:	Growth response of quails (Coturnix coturnix japonica) to varying levels of cassava (Manihot esculenta) tuber meal as a replacement for maize (Zea mays)
Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The manuscript was not improved adequately. It is still low in scientific quality, with corrections needs in the text and references, and rough writing. For example, even the quail species name in the title is incorrect: "coturnix". The response in the authors' reply that 32 quail survived, only intensifies the low quality feeling of this work.	Further corrections have been made in the text and references. Quail species name has been corrected to Coturnix. We are sorry to have used such low number of quails. In addition to our earlier reason, we considered necessary to satisfy our curiosity for quail research and so we decided to make do with what we could get. It was not as if we do not know that the greater the animal numbers the better the statistical result. We hope to improve on subsequent on quail research.
