

Reviewer Comment:

I have no idea for the final decision.

Base on my opinion, the manuscript is very weak. I have been rejected. Also the authors are strongly disagree with my view.

So, I would like to terminate the review all MS, which will further contributed in your journal.

In my view, the quality of MS is very important. Only preliminary data as present form is unaccepted for publication in elsewhere.

This is my opinion.

Author's comment

I assume that the reviewer did not understand my response to the comments made. I didn't insist that his comments were not germane. The purpose of review is to state specific things to be done to improve the quality of a manuscript if found publishable. The reviewer did not say the article was not publishable but based the criticism on the conclusion of the work in one paragraph, without stating point by point what to be done, unlike the other 4 reviewers. I sincerely appeal to the reviewer not to stop reviewing for the journal. I will welcome further comments on the specific things to be done to further improve the paper quality.
