

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	2013_AJEA_7285
Title of the Manuscript:	A Tomato Inducer of CBF Expression 1 (SlICE1) is Involved in Cold Stress Signaling

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have tried to complete manuscript in the theoretical level, no in experimental level. Some parts were remained for next experiments. However, the author has indicated that s/he leave the previous lab, It would be better to do some of them.	<p>We deeply appreciated detailed comments and informative suggestions raised by the reviewer on our revised manuscript.</p> <p>We agree with the matter pointed by the reviewer about additional experiment with samples left at the previous laboratory. However, tomato cultivation system has been already moved from the previous lab. Now we are setting up experiment system of those ICE1 and cold signaling research such as tomato cultivation and immunochemical analysis system, etc, here. Thus, it is necessary to wait for a while before fully setting up of the lab system, in a new lab at University of Miyazaki.</p> <p>As soon as possible, we would like to perform the additional experiments for the next paper with novel data which we are going to obtain at the present laborarory.</p>
