<p>The revision was thoroughly done and each section of the revised manuscript was clearly subtitled. My observations were taken into consideration apart from some minor mistakes to be corrected, for instance in the abstract, the last sentence of the result section should be corrected (there is a full stop after respectively and the following sentence does not make sense).</p> <p>In the materials and methods, I think it shouldn't be or but rather and (line 66: cold stress or salt stress); in line 70 it should be to examine the effects of...and to examine the involvement....; the r of bioinformatics analysis is omitted (line 79)</p> <p>The number (6) has not been corrected yet (see figure 2 B).
