PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	It is not original article and the work has little scientific relevance. The reference is old, the reference newest is of 9 years ago. In the introduction, the author no comment anything about the genotypes used at article. The assessment of these genotypes is not included in your goal, despite three distinct genotypes being treatments of one the factors. The "results and discussion" topic begins with a paragraph that should is in the material and methods because the evaluation of physical and chemical properties of the potting medium is not part of the objective of the work, being only a characterization of treatment. There is statistical error. Tables and figures are inadequate (except table 1). There are not the tables of analysis of variance for factorial. In addition, there is not expose the figures the results of the average test applied (not shown in materials and methods too).	Thank you. All the suggestions have been implemented.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
