

SDI Review Form 1.6

Journal Name:	American Journal of Experimental Agriculture
Manuscript Number:	Ms_AJEA_20734
Title of the Manuscript:	Determination of parasitism efficacy and development of effective field release technique for Trichogramma spp. (Trichogrammatidae: Hymenoptera)
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The authors show that parasitism of <i>Trichogramma</i> spp is efficient when the adults are released. The objective is clear , but there are two things in methodology that I recommend changing: first, place a photo or characteristics of the local of the micro-plot; second, place the distance between release of eggs parasitized and host eggs (in field). I believe those two things will improve this study. The discussion and Conclusion are clear and objective.	A photo of microplot condition has been placed and the distance between release of eggs parasitized and host eggs in open field has been mentioned.
Minor REVISION comments	It is missing a photo in Photo 2 . Please more attention in this case.	Photo 2. has been placed.
Optional/General comments	This is a good paper.
