

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Annual Review & Research in Biology
Manuscript Number:	2013_ARRB_4925
Title of the Manuscript:	Spermatogenic Alterations Induced by Organophosporus Compounds Profenofos, Chlorpyrifos and Synthetic Pyrethroid Lambada-cyhalothrin in Mice

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>I have reviewed the corrected ms of authors and though there are changes carried out, a lot of these are yet to be effected as earlier pointed out in my previous review.</p> <p>Abstract needs to be amended to reflect the true study executed and avoid ambiguities (lot of what is stated in result &amp; conclusions are almost similar with no actual result!). Also same as the introduction, methods and results/discussion. Authors need to state briefly the choice of method used for sperm analyses and why; what is the reason for stratification of classes of mice ? Highlight results with explanatory discuss on them as appropriate. The present format of this section is regrettably very poor and needs further amendments. Check missing references and some few added suggested articles for authors. See manuscript for further corrections.</p>	<p>Dear editor, peer reviewer thank you in advance for your great effort</p> <p>Abstract, results/discussion&amp; conclusions, photomicrograph labelled, spelling errors and wrong quotations (were done)</p>
