- This form has total 9 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	Methodology is OK. The result presented can support a technical paper that will improve understanding of the basin. More important is the establishment of Eocene age for what is considered to be the possible source rock in the basin. Boboye 2012 also established this. A section on stratigraphy and results should be included. Comments included in a copy of the paper attached. The English should be completely overhauled. Statements are made without basis in the paper. Literature reviews should be separated from current findings. Results should be presented before discussion. Key references on the basin and those that addressed the same issue are not referred to. What is new in this work should be emphasized. The paper should be focussed to address the objectives.	A section on lithostratigraphy has been beefed-up and all comments cited on the paper were attended to. Literature review was overhauled. References were fully attended to as well. However, contact made with Boboye did not yield result because he does not have copy of his published paper on 2012. But all opinion presented are based on result findings. Thank you for your objective comments. Regards.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
