SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	The research work is good but need to be structured well grammatically.	The paper is reviewed grammatically and appreciate your advice and thank you in advance for any comments.
<u>Minor</u> REVISION comments	Author should carry out the corrections and re-write the conclusion very well to summarise the whole work , and state the implication(s) of the findings to the general public	I tried to rewrite the conclusion and concentrate the main concern of the research
<u>Optional/General</u> comments	The author was not objective in the presentation of the results. No statistical tool was used to show whether the differences in values were significant or not. I could not find reference to other peoples' work (from any part of the world) in the discussion. Is it that no work has been done in this area? if no, what was their findings?. State whether your work agree or disagree with other peoples work.	This work as motioned in the abstract represent the first trial to determine outdoor radon in Middle Egypt and we are preparing the national programme concerning these measurements.
