

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	MS: 2012/BJAST/2205
Title of the Manuscript:	Biopesticide activities of some plant extracts: a potential alternative to chemical pesticides

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Although the authors changed the manuscript in good manner, but there is only one example of using these two mentioned plants against insects. If they focused on these two plants, there is no need to table 1 that explains about some other plants and their medicinal uses. I suggest to replace this table with another one shows the applications/experiments of <i>Calotropica procera</i> and <i>Annona squamosa</i> against pests, as they emphasized in title.	As suggested, the Table 1 has been replaced by another couple of Tables showing information about the two plants as described into the manuscript.
