Subject: Re: Request for final decision for manuscript number 2012 BJAST 2358

I read the reviews' comments and the new version of the paper. There are two problems need to be considered by the author:

1. As mentioned by reviewer PR, the language needs to be re-polished. Author said he does not know English and do not have good translator. Then, how can he publish a paper in an international journal? It is author's responsibility to write clear and make the article easy to understand but not the readers.

2. In the manuscript, the main content is the mathematical equations. It would be better if authors can figure out how can people use the mathematical model presented in the paper. For example, author may consider to give some clear examples related with real engineering applications. Or else, it is hard to attract the attention from people, who are not quite familiar with this model, to read the paper even if the model may be useful for certain area.

If author can modify the paper covering the above questions, the paper may be acceptable.
