

SDI Review Form 1.6

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	2014_BJAST_10680
Title of the Manuscript:	A Survey on Elliptic Filters
Type of the Article	Review Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	The author has done good job but he/she should give the meaning of “sn” and “sn⁻¹” as used in some expressions in the paper . The author has to check reference style for proper format of the references. He/ she should make sure that all the references are well cited in the paper. This article/ paper is acceptable and publishable.	The function sn is the Jacobian elliptic sinus and it is described at the botton of page 3. sn^{-1} is its inverse function (I decided for the sake of completeness to add a short appendix on elliptic and theta functions and all this stuff is explained there in detail). The references and the literature have also formatted accordingly.
<u>Optional/General</u> comments	I have gone through this paper. The author has really done well. I am confident with this paper. It is well written and well organized with a good background. The part I found most interesting is the presentation of thought which demonstrates the importance of the research. It will make a contribution to the relevant field of research. The objective of this review paper was the detailed and rigorous mathematical presentation of the main aspects, properties and features of the low pass analog elliptic filter approximation. In my opinion, the paper is good and publishable with no significant revision. Once again well done to the author.
