

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	2013_BJAST_7798
Title of the Manuscript:	Delineating Aquifer Systems Using Dar Zarouk Parameters Determined From Surface Geoelectric Survey: Case Study of Okigwe District, Southeastern Nigeria

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have made a rushed attempt to revise their manuscript titled 'Delineating aquifer systems using Dar Zarouk parameters determined from surface geoelectric survey: Case study of Okigwe District, Southeastern Nigeria'. In the process of rushing to correct the work, a new set of grammatical and technical errors have been incurred. I strongly believe that another round of corrections and reviews are necessary before this work can be taken to the level of publication. There are still pockets of technical issues that still need to be resolved. I have attempted to comment and even edit this work (as will be seen inside) along lines that I in my personal opinion considered to be necessary in order to take this work to the next level. If such corrections are done, the work can be accepted.	The manuscript has been corrected and the grammatical and technical errors pointed out by the reviewer taken care of.
