

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	2013_BJAST_8458
Title of the Manuscript:	EFFECTS OF CULTIVAR AND BULB SIZE AT PLANTING ON GROWTH AND BULB YIELD OF ONION (<i>Allium cepa</i> L) IN THE NORTHERN REGION OF GHANA

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Definitely significant progress has been made, but I think that in Introduction part it is more interesting to see data about acreages of onion, average yield and total production of the crop and importance of onion for the region. If authors think that health aspects are also important than allow them to leave that part of the text. I also want to see some new (not older than 5 years) references especially in Discussion part of the paper.	Information about acreages of onion, average yield and total production of the crop and importance of onion for the region has now been incorporated in introduction in this new version of the manuscript. Also new (not older than 5 years) references have been added (see the discussion painted yellow) and some part of the introduction. The discussion has actually been re-written to include all suggestions raised by the final evaluator. Thank you.
