Subject: Re: Request for editorial decision for manuscript number 2014_BJAST_11561

Please find below my comments about the manuscript.

The manuscript still requires careful checking and definitive correction of its content.

The main problem is that the author/authors did not validate its analytical data. There is a lack of quality assurance procedure.

Such validation parameters like recoveries (as a measure of accuracy) and relative standard deviations (as a measure of precision) should be provided.

The manuscript still contains language and constructional errors.

For instance, there is:

- determinate (Abstract); it should be: determine;

- producer and world exporter (L.19); it should be: producers and world exporters;

- macerate obtained are filtered (L.94); it should be: macerate obtained is filtered;

- consumption of cola nuts stimulate (L.192-193); it should be: consumption of cola nuts stimulates;

- tests reveals (L. 195); it should be: tests reveal;

Therefore, all the manuscript should be thoroughly checked and carefully edited.

Although the author/authors explains/explain meaning of abbreviations such as WCN, RCN, PNC and WGK in the Abstract, they should also do it in footnote of tab. 1 (according to one of the referee's request).

The paper can be accepted for publication after considering by the author/authors all the referee's remarks.

Editor's Details:

Prof. Szefer Piotr
