| <b><u>Optional/General</u></b> comments    | <p>A very well written and documented paper. The author studied an interesting aspect of the new method of computer assisted learning. E-Learning seems to be the future of learning, distributed and facilitated by electronic devices, the aim of this study being to investigate the effect of educators' attitudes on the adoption of e-learning, and to increase the rate of implementing it at the academic level in Jordan.</p> <p>The structure of paper is well balanced, Theoretical Framework being a good support for the practical parts – the Method, and Data Analysis, while the last part, Discussion and Conclusion coming simply to confirm what the author stated at the beginning by saying that “the success of a system can be determined by user acceptance of the system”.</p> <p>I recommend the paper to be published as it is.</p> |                                                                                                                                                                                      |
