

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Applied Science & Technology
Manuscript Number:	Ms_BJAST_19232
Title of the Manuscript:	Ambient air PM10 particulate levels at Ashaiman near Tema in Ghana
Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have been able to effect corrections on all the areas pointed out. However, 'The objectives of this study are to identify monthly variations of particulate matter mass concentrations in air, the contribution of each size fraction (coarse and fine) to PM₁₀ levels, the contributions from natural and anthropogenic sources and the possible health effect with reference to WHO and other international standards', is not well written. It could be phrased as: The objectives of this study are 1. to identify monthly variations of mass concentrations of particulate matter in air, 2. establish the contribution of each size fraction (coarse and fine) to PM₁₀ levels and 3. determine the contributions of the particulate matter from natural and anthropogenic sources and the possible health effect.	I will rather prefer it to be 'The objectives of this study are to identify monthly variations of mass concentrations of particulate matter in air, establish the contribution of each size fraction (coarse and fine) to PM₁₀ levels, determine the contributions of the particulate matter from natural and anthropogenic sources and also ascertain the possible health effect.'
