

Editor's Comments:

1. Abstract: The study design mentions 3 different techniques. Mention the name of these techniques.
2. Use H&E to abbreviate Haematoxylin and eosin in the study design and use H&E in place of "hematoxylin and eosin" for the rest of the manuscript (example see in methodology of abstract)
3. In Section 2, Material and Methods, mention source of all the chemicals used. (example, write " All chemicals used in this study were purchased from ..xxxxx..(Company name, place)").
4. The sub-headings in section 2.6 should be corrected. I think "Scoring Criteria" should be 2.6.3 and "Statistical Analysis" should be 2.6.4.
5. Foot note for Figure 1. Mention "all images of xxxxx-stained sections were photographed at X.... magnification". Also mention what is "a" and "b"
6. Foot note for Figure 2. Mention "all images of xxxxx-stained sections were photographed at X.... magnification".
7. Foot note for Figure 3. Mention "all images of xxxxx-stained sections were photographed at X.... magnification".
8. Foot note for Figure 4. Mention "all images of xxxxx-stained sections were photographed at X.... magnification".
9. Foot note for Figure 5. Mention "all images of xxxxx-stained sections were photographed at X.... magnification".

My corrections/suggestions are highlighted in blue in the attached manuscript.

Author Feedback:

The Corrections have been effected in the manuscript as suggested:

1. The 3 different techniques used are the conventional paraffin wax method, the microwave without vacuum and microwave with vacuum technique.
2. H&E has been used to replace Haematoxylin and eosin within the manuscript as suggested.
3. Source of chemicals used was place in section 2 as demanded: All chemicals used in this study were purchased from S. A Madaki (Nigeria) Enterprises, office 13, Maichibi street, Jenta, P.O Box 13348, Jos, Plateau State, Nigeria.
4. Scoring Criteria and Statistical Analysis are placed under 2.6.3 and 2.6.4 respectively.
5. Foot note for Figures 1, 2, 3, 4 and 5 were corrected as suggested.
