SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	I think the author(S) need to re-write the abstract. The abstract is not communicating at all. They should be specific like the main problem the manuscript deal with and straight conclusion 2. Lines 17 & 18 are statements of facts, they need reference. 3. Lines 57, 58 and 59 need reconstruction. Simple English and correct phrases will go a long way to make the reader understand the message. 4. Fig 1, 2, 6 & 7 need references, Except the concept is developed by the author(s) Line 227, need reconstruction of the statement	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	I will like to state here that the manuscript is just providing very minute engineering solution to a bigger problem. If the author(s) can work more and provide at least two more solutions to the identified problem it will be better for main manuscript or communication.	This is the first real approach and application to present the methodology under study. Therefore it is a short article research and as researchers we terminanado the first stage ending with three model validation. Until then, you can have more cases and information relevant and actual field.
