SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	There are deficiencies in describing the methodology. It is stated the use of plastic and crystal but they were used in what porpoise? In line 52, the authors mention the addition of organic supplement: which is its composition? Where is taken from? Are the bacteria used for biodegradation there? Which are the main genera of bacteria, if identified... How many times the experiments were repeated? Information from tables should not be replicated in figures, there's no need to do it. In order to be considered for further revision please be more specific and provide further detail of your work. The results and discussion section is frugal as the methodology.	
<u>Minor</u> REVISION comments	Please take a look to the English writing or seek for professional advice, there are several errors along the paper.	
<u>Optional/General</u> comments	This paper needs a lot of work, is not bad but you need to work hard on writing and present the results in a detailed form.
