SDI Review Form 1.6

PART 1:

Journal Name:	**British Journal of Economics, Management & Trade**
Manuscript Number:	**2013_BJEMT_4098**
Title of the Manuscript:	**OIL PRICE SHOCK, EXCHANGE RATE MISALIGNMENT AND DOMESTIC INVESTMENT IN NIGERIA: A SYNTHESIS EXAMINATION**
Type of the Article	**Research paper**

General guideline for Peer Review process is available in this link:
(http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline)

- This form has total 7 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	**The real exchange rate gragh shows that there is a structural break during the study period, therefore I comment to investigate this existence of this issue with some structural break test.** **to determine stationary properties of the series I comment the authors to use unit root with structural break tests like Zivot and Andrews (1992) and Lee and Strazicich (2004) tests.** **Specially, we can not Interpret the coefficients of VAR because they are reduced form equation, and this is a weakness of this study.** **For generating of real exchange rate uncertainty, authors apply GARCH(1,1), and the mean equation is a function some variables, but they can use an ARIMA in the mean equation.**	The stationarity of the variables are tested (with trend and without trend) using the ADF and PP statistics. The reduced form VAR model has been replaced with the asymmetric VAR model in the study. The GARCH model had been expunged from the study and rather replaced by the Impulse response analysis and the variance decomposition models.
Minor REVISION comments	**Using new methods to investigate the relationship between variables. For example Multivariate GARCH models to investigate the correlation between exchange rate uncertainty and oil shoks.**
