- This form has total 7 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. Abstract: the author has to indicate the main results of the paper in the abstract. 2. Introduction: the objective of the paper is not clear -Efficiency is a measure of performance, then the author has not to use the two terms together. The title of paper has to change - The author does not give an overview about the banking sector in Taiwan. 3. Literature review: the author has to analyse studies about efficiency of banks and especially in the same region 4. Methodology: the author has to precise: * why he uses a non parametric approach * DEA can run under either CRS or VRS, what approach uses by the paper and why? * DEA can be constructed using the input orientation or output orientation. We do not find any information about this in the paper * When, we use DEA, the product of the multiple inputs and outputs must be less than the number of banks. In this study the product is equal 25 more superior than 11. Then the author has to change the number of inputs and outputs. 5. Results: - The author makes confusion between efficiency scores and malmquist scores. The paper analyses efficiency scores but the table concerns malmquist index. -the author has to make comparison with other studies and precise the features of Taiwan banks 6. other remarks -there are some typos. For instance: P1 L4, P1 L11: malmquist (to change by malmquist), P1 L11 o (to change by to), p1 L28: follow (follows), p4 L152: outs (outputs),..... - the author has to precise the meaning of this term: SEM, DMU (p2 L49) in the first time	Many thanks the comments and the manuscript is changed.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
