- This form has total 7 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	1. There are some basic requirements for statistical analysis. Only 60% questionnaire is retrieved, whether the questionnaire is effective? Whether the sample size (72) is enough to conduct the statistical analysis? 2. How do you calculate the RII? It should be explained. 3. It seems that only 55 samples are considered after Table 4. It needs to be clarified. 4. What is the feature of the study site, the Niger Delta, Nigeria? Is there some special characteristics make the valuation methods in this area different from that in other areas?	
<u>Minor</u> REVISION comments	1. Abstract: "Seventy (72)..." should be "Seventy-two..." 2. It is unnecessary to introduce "Significance of wetland" and "The need for valuation of wetlands" in detail. On the contrary, the literature review of wetland valuation especially for the valuation methods should be summarized systematically.	
<u>Optional/General</u> comments	1. The PCA is not very necessary. The results are clear enough based on data in Table 5. PCA is usually used to identify a few key components from a number of factors. 2. The writing language need to be improved.
