

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Economics, Management & Trade
Manuscript Number:	2013_BJEMT_6607
Title of the Manuscript:	PRIVATIZATION, FISCAL POLICY AND MACRO-ECONOMIC AGGREGATES IN NIGERIA "AN IMPACT ANALYSIS"

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Definitions of variables in the article is presented thus where, GOVTEXP = Government Expenditure, PRIVP = Privatisation Proceeds PEXP = Per capita Expenditure, UNEMR = Unemployment Rate, GFCAP = Gross Fixed Capital Formation, EXHR = Exchange Rate, GDP = Gross Domestic Product while f = functional notation.. I think the ideal thing is to allow each variable to be in a separate line and not make it look continuous by separating them with comma (,). In other words, each variable followed by its meaning in a stand-alone line and the next variable in another line thus: where, GOVTEXP = Government Expenditure PRIVP = Privatisation Proceeds PEXP = Per capita Expenditure UNEMR = Unemployment Rate GFCAP = Gross Fixed Capital Formation, etc. This can be handled by the journal in-house editors That transfer of results tables to the annex should be left for the journal. In some journals, all tables that exceed eight lines are normally moved to the annex or appendix.
