SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The researchers have done a great job in written this paper. However, the abstract should be in italic form and it fall short of writing even one of the recommendation. The introduction should have started with some definition of FDI or to start with competitive advantage and trade definitions. There is no citation in the definition of FTA (the first ten lines of the introduction); that is no source. In the page two of the paper the first paragraph there is quotation with no citation "trade diversion means..... The new union". In your literature review Brada and Mendez(1985), Frankel, Stain and Wei(1995), Mukhopadhyay and Thomassin(2010) were not cited in the reference. In the page six under the specification of gravity models Ln is attached to FDI without proper definition and explanation. While other variables like FDIjt is defined. Also, the researchers way and tools used for the computation of the model should be indicated e.g the researcher uses Statistical Package for Social Sciences /excel/ manually with calculator to run the computation.	The authors used italic form for the abstract as reviewer's comment (please see the revised paper). The authors inserted the definitions of FDI, foreign trade and comparative advantage in the introduction part. The authors inserted the source of the definition of FTA (see foot note 4 of the revised paper). In the page two the citation of the definition of static is in the foot note 11: Freeman III, A., 1971, pp. 176-187; Salvatore, D., 1999, pp. 299-306; see also Urata, S., 2010, pp. 11-12. The authors inserted the citation in the reference All the variables, except the dummies, are in natural logarithm form in the gravity equations. This is to make the models smoothly. The authors used the Statistical Package for excel manually with calculator to run the computation.

SDI Review Form 1.6

	Under table two Year of the compilation is not mention and indicated e.g the authors compilation, (2014). I cannot find any recommendation. The reference is in accordance with stipulated guidelines. However, more journals have to be included to enhance the paper. It is a very good attempt that highlights almost all aspect of FTA. It is well written and a job well done.	The authors inserted the year of compilation (2015) The authors removed the recommendations in Section 6. Two more references have been added to the reference list as suggested.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	A well-written paper
