SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Article are written on an interesting subject, but for its publication the author should make changes and answer the following questions. 1 The author argues that international remittances have a positive impact on the economy of Nigeria. Author should explain why from the influence of this factor becomes rich Nigeria, but, for example, Moldova, as was a poor country, a poor country so it remains. Could it be the result randomly? 2.Character of curve income transfers in Nigeria has a bell-shaped, at the end of the study period there was a decrease of income. Could it be that the revenue in the future will fall so that the subject of the article will cease to be relevant?	I commend reviewer for effort put to make the observations and comments in this work. Answer to questions 2 and 3: The trend of remittances in Nigeria is neither bell-shaped nor a reversed of the timeline but rather it is an upward trend of the timeline. (see figure).The questions came as a result of poor formatting of the curve. Response to comments #1: (see line 314-318). Rich or development is a multidimensional process that involves many factors. It is not a univariate but multivariate function of which remittances inflow is one. The state of a country does not depend on one factor neither is it a random variable ...(see recommendations)
<u>Minor</u> REVISION comments	3.In Figure 3 the dependence of the total amount of remittances from the time is reversed the direction of the timeline, it clearly has the opposite direction.	See feedback above
<u>Optional/General</u> comments	4 The author must enter the Discussion section and in detail present their assessment of the results
