

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	BritishJournalofEconomics,Management&Trade
Manuscript Number:	2014_BJEMT_14638
Title of the Manuscript:	Balance of Payments: Nigerian Experience: 1960-2012

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1-The researcher is still in the title of the paper refers to the development while inside the search deals with economic growth, and there is a difference between growth and development. 2- Authors Should be estimate to conclude better results about the relation between POB and GDP growth. You can try with additional independent variables , guiding with determinants of GDP growth. For example :- The model : $RGDP = \beta_0\alpha_0 + \beta_1 BOP \pm \beta_2 EDR \pm \beta_3 INFL \pm \beta_4 EXCH \pm \beta_5 FTD + \mu$ 3- in Recommendations, The researcher to formulate recommendations of the study by the results of the relations that have been measured only. Otherwise you must delete.	We acknowledge the reviewer who has sacrificed his per unit of time to go through this paper and spotted the hiding errors and/or criticisms. We had made out time to do the corrections as recommended by the reviewer. The variables that form the model are six. RGDP is the dependent variable while the independent variables are: BOP, EDR, INFL, EXCH, FTD. The independent variables are tested on the dependent variable. In a work like this, six variables are sufficient because any additional variable (s) may make the pages of this paper to be more than fifteen pages, which tantamount to a thesis or dissertation.
