Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors made changes in the original paper, but it is recommendable further exploring of some topics of our original review form, such as: a) descriptive statistic on respondents; b) application of regression analysis or causality tests in order to test the hidden hypothesis of the paper; c) inclusion of a specific topic for the discussion of results, d) Present the theoretical hypothesis that as certain the association among the paper main concepts.	a) Descriptive statistic on respondents was presented in the first of results section, however added 2 rows (for average and standard deviation) to tables 1 & 2. b) The object of this article is to evaluate relationship between information technology and organizational entrepreneurship, and organizational agility; therefore this is plain for reader that researcher should use of Pearson or Regression tests. But for completing the section of results in paper, was added the results of regression test according to table 8 & 9. c) Unfortunately, I don't understand the concept of this comment. d) The conceptual model was presented in final of introduction section. All of modification in this stage show by blue colour in paper. Thanks a lot
